Claims 1-11 are pending in this application.

DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1, 2, 4 and 11 are rejected under 35 U.S.C. 102(b) as being anticipated by David et al. (GB 885-521).

David et al. (GB' 521) teaches a dye compound diazacarbocyanine having a formula identical to the claimed formula (I) (see page 5, formula (II), page 6, lines 1-7 and STIC Search Report, page 78, the third formula), when in the claimed formula (I), R1 stands for formula (IV), R7 is an alkyl radical, R2, stands for formula (VII), R8 and R9 are hydrogen atoms, and R3 stands for formula (X). David et al. (GB' 521) teaches all the limitations of the instant claims. Hence, David et al. (GB' 521) anticipates the claims.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 1 and 2 are rejected under 35 U.S.C. 103(a) as being unpatentable over Badische et al. (GB 808,308).

Badische et al. (GB' 308) teaches a basic azo dyestuff compound having a formula similar to the claimed formula (I) (see page 2, Example 1), when in the claimed formula R2 is a hydrogen atom, R3 stands for formula (X) and R1 stands for formulae (IV) and (V) and X is a methyl sulfate anion.

The instant claims differ from the reference by reciting dyeing composition containing compound with a formula in which the pyridinium ring is connected at para or meta positions.

Nothing unobvious is seen in substituting the known claimed position isomer for the structurally similar isomer taught by Badische et al., since such structurally related compounds suggest one another and would be expected to share common properties, absent a showing of unexpected results.

Allowable Subject Matter

5. Claims 3 and 5-10 objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

6 The remaining references listed on from PTO-1449 have been reviewed by the examiner and are considered to be cumulative to or less material than the prior art references relied upon in the rejection above.
